Valuation of business assets for insurance purposes

We provide insurance valuations for industrial and commercial enterprises.

Valuations are provided for machinery, equipment inventory and buildings.

We can advise clients how to determine appropriate levels of cover for items such as moulds, tooling, patterns, drawings, records etc.

All valuations are reported on the relevant basis of insurance and in accordance with terms and conditions of the policy. In addition we consider any necessary inflation provisions and reflect these in the recommended insurance amounts.

Our recommended insurance amounts also reflect our client's status with regard to VAT.

We advise on rebuilding periods and recommend suitable amounts for architects', surveyors' and consulting engineers' fees together with allowances for the cost of removal of debris.

We believe in working closely with our clients' insurance brokers and are able to provide appropriate information in situations where the insured seeks to restrict cover or adopt a modern materials basis.

We are able to undertake consultative exercises in situations where detailed valuations are not required.

We can provide periodic valuation reviews to suit your individual needs.
